

DIACOMP ULTRA RA 350

One-step high-performance polisher for finishing and high-lustre on all composite materials

The innovative EVE DIACOMP ULTRA is a new diamond interspersed polisher especially developed for processing of all current composite materials available on the market. This especially includes the new generation of high-filled hybrid composites. The four different shapes with a gold-plated 2,35mm stainless steel shaft enable all inter-oral applications possible.

Due to this variety in shape interdental, occlusal and incisal applications are possible. This one-step polishing system is perfectly suitable for smoothing and subsequent high-lustre polishing. The premium combination of high-quality abrasive and specifically modified bonding allow a pressure controlled polishing process. Smoothing and high-lustre polishing in one step are possible by adapting the applied pressure.

EVE DIACOMP ULTRA combines outstanding polishing results with an excellent durability. All polishers are ready for sterilisation and therefore reusable.

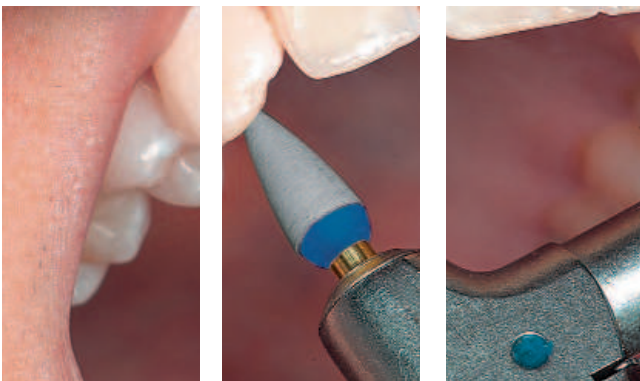

EVE RA350 DIACOMP ULTRA Polishingset for composite

Advantages:

- Rapid one-step high-lustre polishing
- Removal regulation through pressure adaptation
- Excellent durability
- Absolute true running
- FG-shaft available

Recommendations for use:

- Recommended speed: 5.000 – 7.000 RPM
- Use with spray cooling
- Sterilisable
- Adhere to all safety regulations

EVE DIACOMP ULTRA

Grit: medium / fine
 RPM: 5.000 - max. 7.000 min⁻¹
 Pack: 1, 10 pieces

Item:	DCU1	DCU2	DCU3	DCU-W11	DCU-FG1
Item-No.:	17927	17928	17929	17931	17930
Sizes (mm)/Medical Device Class:	4 x 10/IIa	10 x 2,5/IIa	6 x 7,5/IIa	3 x 6/IIa	3 x 6,5/IIa
ISO-No.:	803 204 243 523 040	803 204 304 523 100	803 204 030 523 060	803 204 243 523 030	803 314 243 523 030

Smoothing and polishing in one step
